10. Other:			

Application No.

Applicant(s)

Continuation of 5. does NOT place the application in condition for allowance because: it would have been obvious to any skilled in the art that, since the next wafer needed to be heated before any deposition can occur, it is more convient, economic and processing time can be shorten by heating the next wafer in a same chamber that is already been heated and not preheating the chamber. therefore, it would be desired by any skilled in the art to keep the chamber heated or continuously heating the chamber while moving the second wafer into the chamber in order to save processing time and increase product yield.
